

Many of the patients who come to us arrive in wheelchairs or utilize canes; many have been bedridden for years. Usually after five to twenty treatments which are totally non-invasive, painless and easily applied, they become ambulatory and voluntarily lose their drug dependencies along with their mechanical supports.

Dr. Fred Kahn MD(FRSC), "Backache" 2005

## WHAT PATIENTS SAY ABOUT BIOFLEX

After 2.5 years of attempting to find relief from my sciatic pain problem, today I have NO pain... I had extensive chiropractic and physiotherapy treatment over the past 2 years... It was disrupting on the golf course and while I was performing my usual activities during the day. It even disrupted my sleep... What follows is truly amazing! After three treatments, I could sleep through the night without pain.

-G. LeRiche

Within two weeks...of the laser therapy, I was able to bend down a couple of inches. By 2 months I was able to actually bend down and touch my shoes. It's almost been a year since my last treatment and no pain has returned...I am now able to lie on my back, sit and walk without any discomfort.

-A. Ahmed

BioFlex Laser Therapy has achieved dramatic success rates in relieving back pain.

## HOW DOES BACK PAIN AFFECT YOU?

Disorders of the spine are the leading medical condition that interferes with the individual's quality of life and the ability to work and play. It can occur in the cervical (neck), thoracic (mid) or lumbar (lower) spine and is characterized by a wide range of symptoms including pain, muscle spasm, stiffness, restricted mobility and weakness of the extremities.

Current non-surgical treatments include analgesics, anti-inflammatories, bed rest, spinal manipulation, massage and physical therapy. These can mask or only temporarily relieve pain, leaving many to seek alternate safe and lasting treatments.

## HOW CAN BIOFLEX LASER THERAPY HELP?

This technology provides a safe and highly effective treatment. It relieves pain, increases joint mobility and most important of all, reduces inflammation. In addition, it regenerates the cartilaginous lining of the joints.

In over 3,000 scientific studies, no adverse effects have been reported with the utilization of Laser Therapy. Clearly this characterizes it as a non-invasive, non-surgical, non-toxic method of treating spinal problems.

The BioFlex Laser Therapy Solution has helped thousands of Canadians eliminate back pain, restore normal activity levels and substantially increase their quality of life.
